

AIREX FROM 25 TO 80

AIREX BICOMB FROM 25 TO 50

AIREX 150 - 200

0BAIREX 2S

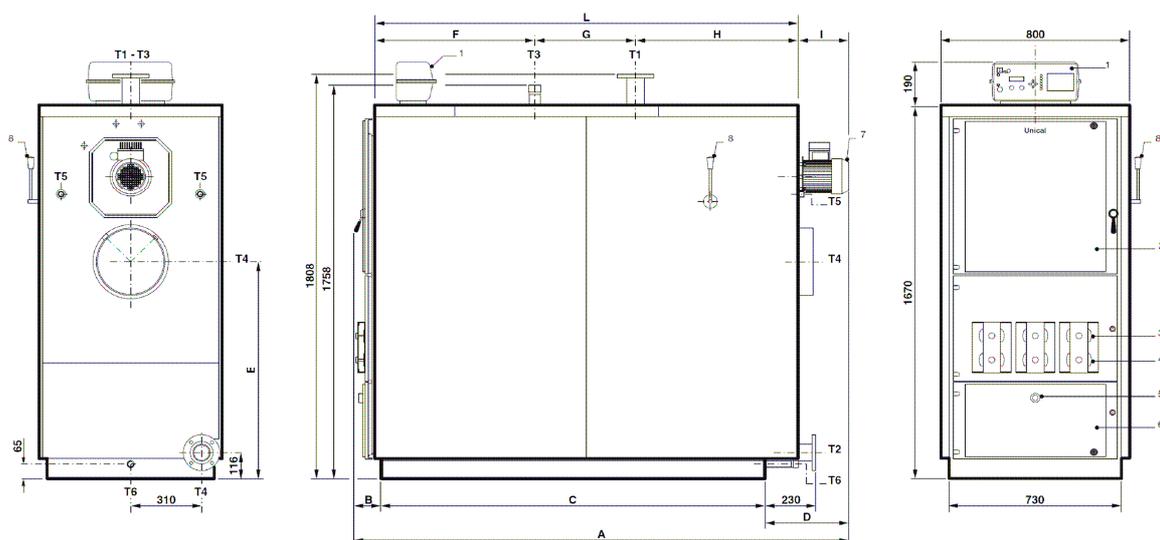

Az AIREX 150 és 200-as inverteres faelgázosító kazánokat javasoljuk alkalmazni, de az Airex 25...80 közötti kazánokat Magyarországon csak külön kérésre hozatjuk be, mert helyettük a jóval kedvezőbb árfekvésű Gasogen kazánokat javasoljuk.

General description

Total gasification, wood fired steel boiler, with pyrolytic combustion

- Reversed flame combustion
- High efficiency, close to 90%
- Combustion optimization and control through the regulation control of the primary and secondary air
- Firewood gasification fan place on the smoke suction
- Refractory catalyst place in the lowest part of the combustion chamber
- Firewood storage room with wall thickness of 8 mm
- Automatic smoke by-pass to avoid the smokes rejection in the room
- Built-in anti-condensation system with thermostatic modulating valves (Patented)
- Models 150 and 200, with heat exchange through vertical smoke pipes and with a special cleaning system
- Wide doors of wood storage room and combustion chamber for an easy wood loading and maintenance
- Casing insulation with anti-tearing rock wool mattress (thickness 60 mm)
- Safety heat exchanger for overheating prevention, constituted by a steel coil, immersed directly in the upper part of the boiler
- Panel board that automatically manages the temperature of the water and the fan operation Models 150 and 200, equipped with electronic panel board with multi-language display and management of the C.H. system
-
- **"BICOMB" version**
- An auxiliary boiler, for gas or oil pressure jet burner, is supplied already fitted on top of the wood fired one, with the following characteristics:
- Dry, reversed flame combustion chamber
- Anticondensation system with adjustable stainless steel turbulators
- Cast iron combustion chamber door, with double opening (to the right or to the left) and ceramic fiber insulation
- Integral insulation of the body with rock wool anti-tearing mattress (thickness 60 mm) Panel board with automatic ignition of the auxiliary boiler when the firewood is finished
-
- Options: Kit of anticondensation recirculation pump

DIMENSIONS AIREX 150 – 200
